计算气动声学作业: 习题二

选择任意一高阶格式(如 DRP格式或者紧致格式),采用计算气动声学方法和周期性边界条件求解如下初值问题:

$$\frac{\partial u}{\partial t} + \frac{\partial u}{\partial x} + \frac{\gamma + 1}{4} \frac{\partial u^2}{\partial x} = 0$$

$$t = 0, \qquad u(x,0) = 0.5 \exp\left[-\ln 2(\frac{x}{12})^2\right]$$
(1)

给出t=18,36,72时的波形图($-20 \le x \le 450$),并对结果进行分析。
